Plántula

Es la estructura que contiene el embrión de la planta y del cuál crecerá una planta nueva.

Es el proceso por el cuál un embrión se desarrolla hasta formar una planta. Para ello necesitará agua, tierra, sol y aire. En primer lugar sale la radícula hacia el micrópilo y se dirige hacia la tierra formándose las raíces.

Los cotiledones empiezan a abrirse y se desarrolla la plúmula que empezará a formar el tallo.

Los cotiledones se secan y empiezan a salir nuevas hojas..
